09/653,788 Customer ID: 38396

IN THE SPECIFICATION:

Please replace the second full paragraph of page 16 with the following paragraph:

The invention is most efficiently used with synchronous architecture, an example of which is disclosed in co-pending application Serial No. <u>09/653,394</u>, assigned to the assignee of this invention. In a synchronous transmitter, each component derives its timing signal from a single master clock, either directly or through simple multiplier or divider means. In a <u>corresponding</u> synchronous receiver, the cross-coupling circuitry is greatly simplified, because each synchronization loop derives its timing signal from the master clock either directly or through simple multiplier or divider means.
